

WAFER BOX WITH A HANDLE DEVICE

ABSTRACT OF THE DISCLOSURE

A wafer box with a handle device is provided. A wafer box includes a wafer box main body for carrying at least one wafer, a handle device having a holding portion being evenly and securely held by an operator with digits so as to transport the wafer box conveniently, and a connecting component for connecting the wafer box main body to the handle device. The connecting component further includes an engaging portion for being engaged with the wafer box main body, a positioning portion for positioning the connecting component on the wafer box main body, and an urging portion for urging against the wafer box main body.
